# Built to manage end-to-end clinical event and endpoint adjudication workflows

Judi
by AG Mednet

## Introduction

# With the goal of attaining precise, consistent analysis of clinical events reported by investigators, central endpoint adjudication is the gold standard in clinical trials.[1]

Clinical endpoint committees, or CECs, "are vital to the objective and unbiased reporting of endpoints in complex trials running across varying clinical practice settings; trials where efficacy and safety outcomes are not clearly/easily defined and have multiple components; and outcomes trials where approvals for registration depend upon safety and efficacy outcomes."[2]

As a clinical trial stakeholder, you already know that the complex processes required to determine outcomes can slow down a clinical trial and result in difficult to follow or failed studies.

**Judi for Adjudication can help automate, expedite and improve outcomes and the endpoint adjudication process in your clinical trial.**

# A unique solution for endpoint adjudication

Judi for Adjudication is designed from the ground up to support investigator sites, CROs, data managers, CEC members and sponsors who submit, collect, manage, organize and adjudicate clinical endpoint data.
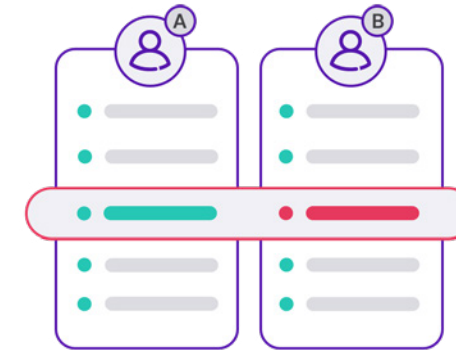

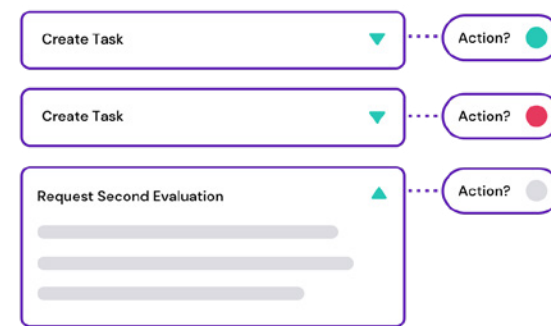

## Your adjudication workflow

Adjudication is a collection of your unique workflows applying to different event types, organizing activities and optimizing tasks while ensuring the quality of data in the system. Stakeholders can concentrate on analysis while Judi handles the management of the entire process.

## Intuitive interfaces for Investigators

Trial coordinators benefit from an intuitive interface that facilitates the collection, de-identification and submission of event-specific documents for review and dossier aggregation. A powerful query management system with configurable notifications and reminders ensures that tasks don't linger and processes can move efficiently.

**Create Task** — Action?
**Create Task** — Action?
**Request Second Evaluation** — Action?

## Global views for CRO Reviewers & Data Managers

Trial managers take advantage of a global view of all their projects, seeing at a glance the state of every event in the system. With an ability to communicate directly with sites, adjudicators, and committees, CROs can keep track of their entire endpoint adjudication workflow, enabling them to keep processes running efficiently.

## Enabling Adjudicator collaboration

Adjudicators benefit from robust dossiers which are easy to navigate. With access to advanced eCRFs that enable them to perform evaluations, vote or request additional information from trial managers, these key opinion leaders can work asynchronously while Judi keeps track of all their activities.

## Seamless Clinical Event Committees

Committee chairs have access to tools and data enabling them to rapidly see where there is adjudicator discordance, enabling them to guide discussion and make final determinations accurately and efficiently.

## Introducing Sponsors Without Bias

Sponsors are provided with multiple options to view the state of their trials, as well as subsets of data and status enabling them to follow progress without violating bias constraints established by the protocol and charter.

One collaboration platform

Cloud based

Built-in close collaborations with trial experts

## Judi for Adjudication

Adjudication workflow solution for Clinical Endpoint/Event Adjudication.

## Judi for Imaging

Medical Imaging workflow solution for Central Image Collection Storage and Review.

## Judi for DSMB

DSMB workflow solution for Data Safety Monitoring Activities

## Judi for Eligibility

Eligibility workflow solution for Central Screening Committees/ Eligibility Reviews

## Judi for Monitoring

Monitoring workflow solution for Remote Source Data Review and Verification

## Judi Flex

Workflow solutions for everything else. If you can map it, Judi can manage it.
